

IDUNEX Motor v1.0.0 - Manual Tecnico de Alcance Final

Cierre de validadores activos fallidos, sin version bump.

Control de release

Control	Valor
SEMANTIC_VERSION	v1.0.0
VERSION_BUMP	NO
CORRECTION_MODE	DIRECT_CANONICAL_NO_PATCH
CORRECTION_SCOPE	RENORMALIZACION_VERSION_OFICIAL_v1.0.0_Y_DEMO_000_2_MODELOS
FINAL_ZIP_SHA256	bbef200d6f0d7bf116853e0d763b90dc0b6454efee831e6dee1b040c78fce0d6
FINAL_ZIP_BYTES	4277381
FINAL_ZIP_ENTRY_COUNT	977
FINAL_ZIP_DIRECTORIES	0
FINAL_ZIP_STORED	0
FINAL_ZIP_TESTZIP	PASS
CREATIVE_OUTPUT_CERTIFIED	FALSE
READY_FOR_PROJECT_DEMO_GENERATION	TRUE

Alcance tecnico activo

Correccion directa sobre IDUNEX_MOTOR_v1.0.0.zip, sin version bump, fork, hotfix, patch externo, factory paralelo ni validator paralelo.

B1: release surfaces internas sincronizadas con scope vigente, compatibilidad mutation self-test y duplicate governance parity.

B2: H261 alineado a NON_SELF_REFERENTIAL_INTERNAL_MANIFEST_POLICY para manifests internos, sin allowlist stale.

B3: certificados internos sincronizados con VALIDATORS_FAIL=0, BLOCKING_WARNINGS=0, FAIL_CODES=[] y SCORE=10/10 solo despues de validadores reales PASS.

El Proyecto 000 Demo no fue materializado dentro del motor; queda habilitada solo la generacion posterior controlada.

LatinosFlow se mantiene como input externo del Demo, no como default activo del motor.

Validadores ejecutados

VALIDATE_MASTER_GOVERNANCE_NATIVE: rc=0, result=PASS, validators_fail=0, blocking_warnings=0, fail_codes=[]
